This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

INTRODUCTORY NOTE

The *Manual for the Study of European History* is designed to meet a double need. Primarily it offers a list of readings for students in the introductory course in European History at the University of Chicago. The division of the bibliography into weeks of class work and large topics and the grouping of the titles under Prescribed and Collateral Reading are due to this purpose of the manual. Likewise it is the need and capacity of the student in his Freshman and Sophomore years at college which has determined very largely both the selection and the arrangement of the books cited. It was not the intention to make the bibliography in any sense exhaustive, but the compilers hope that on the whole a representative and fair selection of titles is here offered, sufficient for the varying needs of students and instructors.

It will be apparent, however, that both the amount and the scope of the reading are beyond the requirements of even the exceptional student. This is due to the fact that in the second place the *Manual* undertakes to furnish a guide for reading in European History for those outside of academic halls. The number and variety of references given make allowance for varied interests and also for varying local library facilities.

To enhance the usefulness of the *Manual* a list of map references has been added wherever possible. Likewise the spirit of the several periods and the point of view of changing ages are represented in the works cited under Source Reading.

In its present form the *Manual* is a considerably modified and recast new edition of an earlier classroom manual used at the University of Chicago. It has thus grown out of the teaching experience of several years and embodies the judgment of a number of teachers who in the course of these years have tested out these readings in actual classroom instruction.

Authors and titles of works cited in the *Manual* are quoted in full only the first time a given book is mentioned within the three divisions of the subject.
